**MAINTENANCE SERVICES FOR 2008**

Our goal at North Shore Pool & Spa is to help you get the most enjoyment out of your swimming pool or spa each season. We help you keep up with your ever-changing water chemistry, which must be balanced consistently to prevent eye or skin irritation, equipment corrosion, and unsanitary water conditions. As we are attending to the water, we can perform a variety of routine maintenance tasks, such as vacuuming, brushing, skimming, and cleaning the grease line. Most important of all, you will have a trained service technician checking over the entire pool operation on a regular basis.

The following are our most popular maintenance plans. We can also set up a program tailored to your specific needs. Please notify us early to reserve a spot on one of our service routes. Maintenance service chemicals are not included in the weekly service price. We use our own brand of chemicals for quality control and only charge you for the amount used.

**PLAN I** **WEEKLY CHEMICAL CHECK**

This plan is a good choice for those who like to do some of your own maintenance or who wish to augment an automatic pool cleaning system. Please note: Chemical checks are performed *only* on a Monday or Wednesday.

- Check and adjust the water chemistry
- Backwash the filter
- Clean the baskets and hair & lint traps
- Perform very minor repairs
- Report any operational malfunctions or chemical shortages

**PLAN II** **WEEKLY FULL SERVICE**

This is our most popular maintenance plan, which includes all the weekly routine tasks necessary to ensure a sparkling, sanitary, and well-maintained swimming pool. Full Service is performed only on weekdays Monday thru Friday.

**Chemical Check described in Plan I above, PLUS:**

- Vacuum the bottom of the pool
- Skim the water surface
- Brush the walls and floor
- Clean the grease line from the pool walls

**PLAN III** **FULL SERVICE TWICE WEEKLY**

For our most discriminating pool owners, we suggest our most comprehensive service—Plan II, on a twice-weekly basis. This program will bring a service technician to your pool early in the week for a post-weekend cleaning, and again at the end of the week so that the pool is ready for the weekend. Plan IV services performed Mon/Thurs or Tues/Fri only.

**PLAN IV** **SPA FULL SERVICE**

Due to the difference in water volume and temperature between swimming pools and spas. Spas require a little more attention. Water chemistry and sanitizer levels are constantly changing. This is a great plan and quite a time saver for the homeowners' task in maintaining a clean, clear and healthy spa environment.

- Vacuum interior bottom of spa
- Skim the water surface
- Clean the grease line from the spa walls
- Remove and clean the spa filters and exterior of the spa cover
- Check and adjust the water chemistry
